What is a **mobile protection product?**

A mobile protection product can be separated into two distinct categories: security and management.

The security features range from antimalware, anti-phishing, limiting access to unsecure connections, and much more.

The management includes remotely wiping devices, restricting application installs, pre-configuring devices for users, and other items related to IT management.

One important distinction to note is that Apple mobile devices are unable to leverage security features such as antimalware due to restrictions placed on non-Apple applications. Therefore Apple devices only have the management portion of mobile protection products.

Why mobile protection?

RANSOMWARE

Ransomware has traditionally been a major concern on desktops or servers, but since 2014 ransomware has also existed on Android devices. In 2014 we saw the first Android ransomware in the form of Simplocker. Just like the desktop variants, mobile ransomware has continued to evolve to employ new practices and new payload techniques to ransom mobile devices.

When a business experiences a ransomware attack, they quickly realize that the backups they have are not recent enough, so the business feels as though they must pay the ransom.

ESET Endpoint Security for Android provides layers of defense to not just prevent ransomware, but to detect it if it ever exists within an organization's mobile workforce. It is important for all businesses to prevent and detect ransomware, as every time a ransom is paid, it convinces the criminals to continue to utilize this attack method.

STOLEN OR LOST DEVICES

Nowadays, organizations are enabling employees to work from remote locations such as their home or coffee shops. By allowing employees to work remotely from the office, organizations have realized that this freedom brings with it a new set of challenges in the form of lost and stolen devices. These devices not only contain work related documents, files, and emails, but also can contain information that could harm an organization's reputation.

ESET security and Mobile Device Management (MDM) solutions for mobile platforms provide an organization the ability to remotely lock or remotely wipe devices. This ensures that sensitive information is not compromised when a device is lost or stolen, nor during an employee termination

DEVICE MANAGEMENT

Organizations, due to liability reasons as well as time-management reasons, want to ensure that their employees are only using work-provided devices for work reasons. Also, mobile devices become more risky when they are allowed to connect to insecure networks or when they have certain features enabled.

ESET solutions for mobile platforms provide organizations the ability to restrict users from certain applications, calling of certain numbers, as well as device features such as cameras, Wi-Fi, and Bluetooth. In addition, all of this functionality can be deployed as a time-based policy, so features are locked down only during work hours.

In 2014 we saw the first Android ransomware in the form of Simplocker.

Allowing employees the freedom to work remotely from the office, organizations have realized that this freedom brings with it a new set of challenges in the form of lost and stolen devices. These devices not only contain work related documents, files, and emails, but also can contain information that could harm an organization's reputation.

It is important for all businesses to prevent and detect ransomware, as every time a ransom is paid, it convinces the criminals to continue to utilize this attack method.

No need for dedicated solutions for full Mobile Device Management. Oversee all company iOS, Android and all other endpoint devices from a single point with ESET Security Management Center.

“The major advantage of ESET is that you have all users from one console and can manage and properly review their security status.”

Jos Savelkoul, Team Leader ICT-Department; Zuyderland Hospital,
Netherlands; 10.000+ seats

The ESET difference

COST EFFECTIVE

No need for dedicated solutions for full Mobile Device Management. Oversee all company iOS, Android and all other endpoint devices from a single point with ESET Security Management Center.

MULTILAYERED PROTECTION

ESET combines multilayered technology, machine learning and human expertise to provide our customers with the best level of protection possible. Our technology is constantly adjusting and changing to provide the best balance of detection, false positives and performance.

ESET CLOUD MALWARE PROTECTION SYSTEM

Whenever a zero-day threat such as ransomware is seen, the file is sent to our cloud-based system ESET LiveGRID®, where the threat is detonated and behavior is monitored. Results of this system are provided to all mobile endpoints without requiring any updates.

PROVEN AND TRUSTED

ESET has been in the security industry for over 30 years, and continues to evolve our technology to stay one step ahead of the newest threats. This has led us to be trusted by over 110 million users worldwide.

UNPARALLELED PERFORMANCE

Countless times, organizations biggest concern is the performance impact of a mobile protection solution. ESET products continue to excel in the performance arena and win third-party tests that prove how light-weight our endpoints are on systems.

WORLDWIDE PRESENCE

ESET has 22 offices worldwide, 13 R&D facilities and presence in over 200 countries and territories. This helps to provide our customers with a worldwide perspective on all the most recent trends and threats.

“ESET security solutions have protected and alerted Primoris IT department on numerous occasions to serious threats and infections, most importantly ransomware.”

Joshua Collins, Data Center Operations Manager; Primoris Services Corporation, USA; 4.000+ seats

Use cases

Ransomware

Not only is ransomware a desktop and server threat, but it is also a threat on mobile devices. Businesses want to make sure that all of their data is protected from being ransomed.

SOLUTION

- ✓ Deploy ESET Mobile Security to all mobile devices to ensure that Android devices are protected from any type of malware.
- ✓ Restrict Android devices from installing applications from unknown sources to limit risk.

Data loss

Organizations are not only concerned with devices being lost or stolen, but also concerned with data theft when an employment is terminated.

SOLUTION

- ✓ Enforce security policy that requires mobile devices to be encrypted.
- ✓ Implement security policies that require passcodes or pins to be set on all devices.
- ✓ Lock-out or remotely wipe devices when needed.

ENDPOINT
SECURITY
FOR ANDROID

Device compliance

Different organizations have different policies related to use of mobile devices, and administrators want to ensure that all devices and users remain in compliance.

SOLUTION

- ✓ Implement restrictions to limit phone calls and messages during work hours to work devices.
- ✓ Restrict which applications can be installed on devices.
- ✓ Restrict access to unsecured Wi-Fi networks.
- ✓ Ensure that security features of phones are enabled and implemented.

MOBILE DEVICE
MANAGEMENT
FOR APPLE iOS

*“Centrally managed security on all endpoints,
servers and mobile devices was a key benefit for us.”*

IT Manager; Diamantis Masoutis S.A., Greece; 6.000+ seats

Organizations are not only concerned with devices being lost or stolen, but also concerned with data theft when an employee is dismissed.

Technical features

Android/iOS

ANTI-THEFT

Easily remote lock, wipe, or kick off a siren when a device may be lost or stolen. In addition, send custom messages directly to devices, or set up lock screen information to help ensure devices get returned to proper owners.

APPLICATION CONTROL

Offers administrators the option to monitor installed applications, block access to defined applications, permissions, or categories and prompt users to uninstall particular applications.

DEVICE SECURITY

Left up to a user, device security is usually not implemented properly. So ESET allows admins to define password complexity requirements, set screen lock timers, prompt users to encrypt their device, block cameras and more.

MANAGEMENT SERVER

Mobile products are fully managed from a single-pane-of-glass that can be installed on Windows or Linux. In addition to installing, ESET has a virtual appliance that you can simply import in for quick and easy setup.

Android only

MULTILAYERED DEFENSE

A single layer of defense is not enough for the constantly evolving threat landscape. All endpoint products have the ability to detect malware pre-execution, during execution and post-execution, all while remaining optimized for mobile.

MACHINE LEARNING

All ESET Endpoint products have been using machine learning in addition to all other layers of defense since 1997. ESET currently uses machine learning in conjunction with all of our other layers of defense. Specifically, machine learning is used in the form of consolidated output and neural networks.

ANTI-PHISHING

Protects users from fake websites that attempt to acquire passwords, banking data, and other sensitive information

APPLICATION AUDIT

Tracks applications and their access to personal/company data sorted by categories, allowing administrators to monitor and control applications' access.

iOS only

APPLE iOS MANAGEMENT FRAMEWORK

No need for dedicated solutions – take advantage of Apple iOS Management Framework and oversee security of all company iOS devices – from a single point with ESET Security Management Center.

PUSH ACCOUNT SETTINGS REMOTELY

Remotely push out account settings such as Wi-Fi, VPN and Exchange information.

MOBILE DEVICE MANAGEMENT

User and admin is automatically notified if the current device settings are not in compliance with corporate security policies and suggests the necessary changes.

ESET SECURITY MANAGEMENT CENTER SETTINGS FOR iOS MDM

ESET SECURITY MANAGEMENT CENTER SETTINGS FOR ANDROID

About ESET

ESET – a global player in information security – has been named as the only Challenger in the 2018 Gartner Magic Quadrant for Endpoint Protection Platforms.*

For more than 30 years, ESET® has been developing industry-leading IT security software and services, delivering instant,

comprehensive protection against evolving cybersecurity threats for businesses and consumers worldwide.

ESET is privately owned. With no debts and no loans we have the freedom to do what needs to be done for the ultimate protection of all our customers.
